'Implement UGD in these areas of East Tambaram'

The cement road at Sampathkumar Street in Sundaram Colony in East Tambaram was laid more than 10 yrs ago, and is not in a good shape.

In areas such as Sampathkumar Street, Vaikkam Veerar Street, Peter's Lane street, part of MGR Colony, UGD facilities have not been yet introduced. The reason provided to us by officials is that Kannagi Street belonged to Chitlapakkam Panchayat limits before it was added to Tambaram Corporation three years ago, due to lack of coordination between Chitlapakkam panchayat and Tamba-

ram Municipality this UGD plan was not implemented.

But now all these areas are under control of Tambaram Corporation. We are requesting the Tambaram Commissioner to visit these places urgently and introduce UGD system at the earliest.

Walkathon to protect Nanmangalam Eri

On February 16, the volunteers of 'Save Nanmangalam Lake' will go on a walkathon to create awareness about the Nanmangalam Lake.

Spanning 180 acres, the lake has been neglected for years, leading to garbage dumping, and sewage water inflow from Sembakkam and Chromepet regions.

This has resulted in the growth of water hyacinths. The lack of maintenance by the Water Resources Department, has further exacerbated the issue, with most of the water flowing into the

The Nanmangalam Lake on February 15.
PHOTO: SPECIAL ARRANGEMENT.

Keezhkattalai lake without being stored in the Lake. The walk will be held from Zion School, Sembakkam, to the Lake, from 7 to 9 a.m.

The volunteers of 'Saving Chitlapakkam Lake,' Exnora, Environmental Awareness and Protection Association and students of Madras Christian College, SIVET, East Tambaram, and Gowrivakkam, are also taking part in raising awareness about the importance of lakes and the need to protect them from degradation.

For details, contact 9282424272.

You can be our volunteer-writer

Dear readers, you can be our volunteer-writer by writing to us about issues and events in your neighbourhood. You should send the write-ups to downtownfeedback@thehindu.co.in. Letters must carry the postal address and contact number.

Kavitha says, “The monthly contribution by people to make the products helps meet some of our needs.

Sometimes, I have to contribute from my disability pension to make and market the products.

In the coming days, I plan to start a vocational training center to train people with the skills they need to enter companies and factories, making them independent.”

Recently, a team of social activists V. Santhanam, Meenakshi Sundaram, ‘Police’ Krishnamoorthy, and ‘Kanchi’ Ganesan honoured the activist with a shawl and presented a cash award.

V. Santhanam said, “The State government should provide her with a good home in Pammal.”

B. Kavitha can be contacted at 91762 56748.

more than 1,000 differently-abled people in Chennai, Chengalpattu, Kancheepuram and Tiruvallur districts to avail various welfare schemes of the State Government. Most prominent of them being availing tricycles and sewing machines, getting pension and other healthcare benefits.

She runs a business unit producing paper bags, seed pens, and herbal and organic diapers.

Women’s college organises reunion

As part of its 20th anniversary celebrations, the Vidhya Sagar Women’s College at Vedhanarayanaapuram in Chengalpattu, organised a grand alumni meet on February 9.

Over 2,000 students attended the meet and recalled the good old days.

The college management honoured its distinguished alumni from 2005 to 2024 batches at the meet.

The meet featured cultural performances, games, and sports

competitions.

Vikas Surana, correspondent, and R. Arunadevi, principal of the college, graced the meet.

The correspondent and the principal encouraged the alumni to strive for excellence personally and professionally.

The alumni thanked the management for the meet, which served as a platform to reconnect with their alma mater, rekindle old friendships, and create new memories, added the release.

RWA installs CCTV cameras at Arkeeswarar Colony

More than 40 CCTV cameras were installed by the Arkeeswarar Colony Residents’ Welfare Association in Chromepet to enhance residents safety.

The Colony has six streets and

each of them have got a camera.

Three cameras have also been installed at the junctions in the locality with money pooled in by residents.

V. Santhanam, a social activist and advisor to the Arkeeswarar Co-

lony Residents’ Welfare Association, inaugurated the facility.

Digital video recorders have been installed, and the cameras footage could be stored for weeks, say residents.

Foggy mornings continue

Academicians from city colleges author book on tourism and cuisines

The Department of History at Stella Maris College organised an international seminar on "Tourism and Cuisines: Journey through Taste, Flavours across the Globe" on February 8 at Stella Maris College.

Chef Damu was the chief guest. Keynote addresses were delivered by adjunct professor Huang Soon

Fook, Binary University Malaysia, Amy Allocco, Elon University, North California, USA; Chef Ramkumar Varadarajan; J. Eugene, IHM, Chennai and Dr. Anbumalar, Stella Maris College.

All of them spoke on different aspects of Indian and international cross cultural impact and the tourism perspectives. An international

food festival where students prepared and displayed international foods took place in Stella Maris College campus.

Padmashree Chef Damu released a book authored by academicians from across the city colleges. The book is titled *Tourism and Cuisines: Culinary Treasures from every corner of India*.

SHARON JESSICA MICHAEL

In Franz Kafka's *The Metamorphosis*, Gregor Samsa wakes up to an unsettling truth: he has transformed overnight into an insect, with no say in his own becoming. Neeraja Arjun's transformation was not entirely unbidden, certainly not grotesque, but indubitably as life-shifting as Gregor Samsa's. At CIT Colony in Mylapore, Neeraja lays up unlikely treasures – citrus peels and similar organic discards – and hobnobs with microbes, in a spirited effort to impart worth to waste; and she has hired herself as an unapologetic spokesperson for alternative organic cleaning solutions, clambering on to platforms where the message can be amplified. This picture is indeed vastly removed from the one that defined her everyday reality only a few years ago: a homemaker dabbling in sustainable practices and applying them within the closed walls of familial wellbeing.

Neeraja dons the mantle of a bio enzyme maker and she dons it in a manner campaigners wear their ideologies. Unlike most other bio enzyme makers, she ensured early on that the activity broke out of the prison walls of her kitchen. A few years into bio enzyme making, she kicked the activity upstairs, collaborating with a commercial bio enzyme manufacturer. She would go on to fashion her own brand, called PUVI which she promotes through her sustainability store called The Canopy Tales. However, the most significant aspect of her work, one that steers her a whole galaxy away from DIY bio enzyme makers and even a horde of those practising it professionally is her desire to share her knowledge with women self-help groups. Neeraja speaks on sustainability at various fora, particularly on college campuses and in corporate houses.

The road to Mylapore began in Tiruchirappalli. In the prelude to this journey, her hands were full, one cradling a newborn, the other clutching a questionnaire resulting from introspection: how does one cleanse without consequence? How does one strip away dirt without leaving behind something far worse?

"I just wanted a safer way to wash my child's clothes," Neeraja recalls. That is when she found bio enzymes and by 2017 mastered the science-art of making it through gratuitously but helpfully offered YouTube tutorials. While the world stockpiled disinfectants during the pandemic, her home was stationed

A solution at multiple levels

in a microbial utopia, sterilised by raw life, not chemicals. It was not until 2021 that the real shift happened: when she moved to Chennai. Her research deepened, leading to her mentor, Shrekant, who is based out of Coimbatore and owns a brand (@houseofgrownest) that makes and promotes sustainability-related products. Their insights reinforced her faith in bio enzymes. From having seeped into her routine, bio enzyme making was now redefining it. It was defining her on the personal and professional fronts.

Educational training

A snatch of a back story would place this pursuit in perspective.

Neeraja's educational training geared towards environment-related professional practice proved a cul-de-sac, failing to take her to the promised destination. She is qualified in GIS for environmental modelling and management, which she studied in Europe on a scholarship in 2009-10. After returning to India, she found that GIS was still a nascent industry

and struggled to find opportunities in the field. With marriage, she settled down in Tiruchirappalli, where she lived for nearly a decade until 2021. With localities marked by stretches of paddy fields and banana plantations, Tiruchirappalli supported her passion for organic farming. She visited many an organic farm to understand

Bio enzyme making usually occupies the DIY stratosphere, the pursuit entrapped within the prison walls of private kitchens. Here is a resident of Chennai who set it free, building up a repertoire of bio enzyme varieties and putting them out in the market; and most importantly, sharing the lessons from this journey with women self-help groups to empower them

organic practices. In those years, she was unconsciously searching for her place in the sustainability ecosystem, settling on a pursuit that would help her shore it up in a small way. The unspoken desire materialised when she discovered her metier in bio enzyme making, following the move to Chennai. Everything seemed to happen on cue. She found herself racing towards the summit of Abraham Maslow's pyramid of needs – self-actualisation.

First, in only a little expendi-

ture of time, her repertoire for bio enzyme making broadened. "I love experimenting and bio enzyme making gave me that space. I have crafted over 30 varieties of bio enzymes, some defined by known and regular raw materials such as lemon and orange peels and others by less-known, the latter list including flowers, notably marigold, Asian pigeonwings (*sangu push-pam*) and night jasmine (*parijath-am*)." Between them, the 30 varieties of bio enzymes serve three applications: as floor cleaner, laundry liquid and dishwashing liquid.

Bio enzyme making might be ruled by formulas, neatly laid down ratios of ingredients. While swearing by the science of it, Neeraja is enamoured by the craftsmanship glazing it. "I love the unpredictability of it," she admits. "Each batch is different. Each one has its own scent, its own personality."

In the early years when she was making bio enzymes on a reasonably sizeable scale, partly due to a collaboration with a manufacturer, she was yoked to a demanding routine.

Challenges at various levels – from the production process to the pricing – had to be dealt with. Though daunting, Neeraja kept at it. The process was labour-intensive, the yield limited, and yet, she priced her products as accessible as she could, says Neeraja. Beyond fermentation, one major cost factor was laboratory testing. "Because bio enzymes involve probiotics, they have to undergo extensive lab testing to ensure quality and safety," she says. These tests added to the overall cost but also ensured that customers received a product that was not just environmentally friendly but also safe for their homes and families. "The margins are slim because I want more people to try bio enzymes.

But I also have to be realistic. If someone expects a handcrafted product to match mass-market pricing, they're not seeing the full picture."

In any sustainability journey, one would come upon a molehill (if not mountain) of contradictions sooner or later. In large-scale fermentation, the very vessels that cradle these bio enzymes – the jars where transformation happens – are made of HDPE plastic. "Glass and aluminium would be ideal," she acknowledges, "but they are impractical for large-scale fermentation. The solution is not about demonising plastic but using it wisely." This, she believes, is the essence of sustainable living – not a rigid doctrine, but a practice of making conscious, balanced choices.

Knowledge sharing

Environmentalism would be sustainable in the deepest sense of the term only if it heals social wounds, in small but significant ways, Neeraja makes sure it does. She offers the how-to of bio enzyme making to women self-help groups. In this context, she is associated with Women's Indian Association (which she got introduced to by way Wipro Urban Ecology Small Grant and Care Earth Trust) conducting regular sessions on bio enzyme making for the women whose lives the organisation is trying to improve.

"The real magic is not just in the jars, but in the people who learn to make them," she says. In a village near Mahabalipuram, she trained a self-help group of 20-30 women, passing on to them what she had learned. she left the session wiser by a new bio enzyme-making trick she picked up on account of it.

At the end of the session, one woman hesitated before asking, "Can we make bio enzymes from cashew fruit?" Neeraja had never heard of anyone trying their hand at this. The woman explained that cashew-processing industries in the area discarded vast quantities of the fruit, treating it as waste. Intrigued, Neeraja took some home and let it ferment. Three months later, the results were astonishing – better than citrus peels. "That is when I learned innovation is sometimes just about paying attention."

(Clockwise from bottom): Neeraja Arjun speaking at a college; two interns at The Canopy Tales; Neeraja at WIA; and during an organic products sale.

Devika G

to this role and found my confidence," she says.

Her enthusiasm for learning was shining bright like the morning star and eluded nobody's notice. And it caught the eyes of WIA president Padma who had just then launched an initiative to impart vocational skills to women from an underprivileged background. Recognising Devika's eagerness in utilising this opportunity, Padma introduced her to Neeraja Arjun, a sustainability campaigner, who was seeking to train people in bio enzyme making.

In the moments that she could snatch for herself, which was during the children's lunch time at the crèche, Devika would make bio enzymes. With Neeraja's guidance, Devika released her first batch of bio enzymes on October 19, 2024. The response was overwhelmingly positive. One of her neighbours even sent her a photograph of a hibiscus plant that had flourished on account of the bio enzymes being applied to the soil.

"When I saw the picture, I felt proud. Something I had made was helping plants grow. That was when I knew I wanted to continue doing this," she says with a smile.

Encouraged by the feedback, Devika began teaching women in her neighbourhood about waste segregation and how certain types of food waste can be transformed into useful cleaning products.

"When I realised waste could be turned into something valuable, I started seeing it differently. Now I tell others – do not throw it away, turn it into something useful!" she gushes.

The avid student of bio enzyme making had become an adept teacher of it. Devika has trained 10 to 15 women in her community and 10 of her colleagues at WIA in bio enzyme making. Their bio enzymes, which can be used as floor cleaners, dishwashing liquid, laundry detergent and stove cleaner, have gained popularity among residents of Mylapore and even found buyers from Poland.

For Devika, learning a skill-based occupation is a form of life-long empowerment.

"When women have skills, they have confidence. Even if the men do not provide, we can still run our families. And the best part is that bio enzyme making requires no investment – it is simply making use of what we already have," she says. "I started this journey to support my family. But today, I do it because I love it."

Despite the challenges, Devika does not pass by opportunities for learning and new challenges.

Whether experimenting with new ideas or teaching others, she remains driven by one goal – to make a difference, both at home and in her community.

After a succession of tragedies, Devika G., found employment as a helper at WIA crèche on Greenways Road, and rose to the role of teacher in time. Seizing an opportunity at WIA to learn bio enzyme making from an expert, she augmented her income. She is now a bio enzyme evangelist, imparting the skill to people around her neighbourhood

SHARON JESSICA MICHAEL

Often times, right within the constricted and overpoweringly suffocating circumstances of one's life, there would be doors of escape. When discovered and opened, these hidden doors provide fresh air, new vistas and purpose. Devika G., has found those doors consistently and made good the possibilities they led into.

A resident of Greenways Road, Devika has seen the Women's Indian Association's (WIA) facility located on the same road, at close quarters, right from the cradle. It has always been her second home.

Her mother was on WIA's payroll, serving as a helper at the WIA Creche. After an unexpected turn of events, really unexpected, Devika found herself joining that payroll.

Here is what happened. At a young age, Devika was orphaned, losing both her parents. After Devika's mother passed on, her grandmother took up a helper's role at WIA. Devika was just 16 years old

when tragedy struck again. Her grandmother passed away: it was a rude jolt to a ship that just then seemed to have steadied and was sailing on an even keel.

Now at 16, Devika was on her own, and added to that, had a younger brother to take care for.

"There was no one else to earn for our family, so I took up my grandmother's job at WIA," she recalls.

She worked as a helper for three years before the Administrative Officer at WIA, Pandian, recognised her dedication and encouraged her to become a teacher. In 2004, she stepped into her new role as teacher of basic elements of education – the alphabet, rhymes and so on – at the crèche, where she now looks after around 50 children aged between two and five. In addition, she took up tailoring and also began making *sattu maavu kanji* – a nutritious porridge mix – that she supplies to hospitals and people around her neighbourhood.

"I have always wanted to learn new things. Even if something is difficult, I tell myself to give it a try, at least once. That is how I grew in-

A *balancing* act

With Class X Board examinations having begun, *The Hindu Downtown* takes a close look at the daily schedule of three young sportspersons in the city who are appearing for those exams

LIFFY THOMAS

‘I cannot afford to skip the practice’

Fifteen-year-old M. Hansini appeared for her English exam yesterday (February 15) – and it is a Central Board of Secondary Education (CBSE) Class X board examination. Her friends should not be surprised if they do not find her plugging away at her books for the next paper. Of course, she will study, but also take a break for something that is equally important to her, even during these times. That is table tennis. When this reporter spoke to her a few days before her exam, Hansini, a Mylapore resident, had returned home after a table tennis practice session at Andhra Club in T. Nagar, and had no plans to give up her regular sports routine during this examination season that stretches on for a month.

“In fact, I took up an additional routine three weeks ago: working out in the gym for over two hours every day which is getting quite intense every passing day,” says Hansini, a Class X student of P.S. Senior Secondary School.

Exams do not come in the way of this promising ping pong player who was recently ranked the youngest National Champion in the under-19 cate-

gory. Her day starts at 7 a.m where she attends online tuitions in science, followed by a gym workout and ping pong sessions for three hours in the evening.

Among the players selected for the Sai National Camp happening in Bengaluru, Hansini has requested that she be allowed to join in late. “Luckily, this is off-season and I do not have any major tournaments lined up, but I cannot afford to skip my regular practices if I have to compete in the season starting in June,” she says.

Hansini’s parents are grateful for the support from the school. “In Class IX, when my parents were contemplating moving me to the National Institute of Open Schooling, which is more flexible, so that I could devote more time to sports, the school principal assured them that I can cope well and should not leave the school,” recalls Hansini.

For the pre-board examination Hansini could write only two paper as she was travelling on tournaments.

M. Hansini

‘It helps to take it easy’

Arising speed skating player Aghil Anand likes to set priorities when it comes to academics and the skating rink. A Class X student of Maharishi Vidya Mandir in Ayanavaram, he will be appearing for his Board examinations from March 25. Aghil has slowed down a bit in hitting the rink but has not given up. “My first priority is giving my best in the examinations and I am cool about it. I cannot take a break due to examinations or my speed will reduce drastically,” says Aghil, who completed the second revision test conducted by his school on February 14. This weekend, his father will be taking him to the practice sessions.

During the examination season, the routine of practising on the roads is restricted to the weekends.

A regular at the Anna Nagar Roller Skating Club, Aghil makes sure he gets a dose of fitness at home practising skipping for 15 to 20 minutes, working on dumbbells and choosing a few weight-lifting exercises.

Aghil’s best outing in 2024 was winning a silver and a bronze at state level tournaments. His father M. Anand says his son is an easygoing boy and happy with the outcomes he has achieved in speed skating so far.

Navigating the 64 squares and a major exam with poise

Sharon Rachel Aby

It is around 10 p.m. on February 14 and Sharon Rachel Aby has just come out of an online class conducted by her English teacher ahead of her CBSE Board examination the next day. A jovial sounding Sharon is pumped up talking to this reporter on the phone. “Ma’am revised some important topics with us and also prayed for all of us, so it was a good meet-up with the class again,” says Sharon, a student of Spartan Exclusive School in Mogappair.

The 15-year-old with Spinal Muscular Atrophy, a rare degenerative disease, is among the most promising chess players in the differently-abled category, competing and winning honours at various important tournaments including the Asian Chess Championship in Kyrgyzstan.

Despite the limiting factors (Sharon moves with the help of a motorised wheelchair), she is comfortable juggling academics and the demands of the 64 square board.

She ended 2024 on a high with tournaments in Kyrgyzstan, Armenia and Jharkhand. These tournaments are physically and mentally challenging, so coming back to be in the company of books is something Sharon enjoys. “Studying is some kind of a de-stresser,” says her father Aby Mathew.

An academically bright student, Sharon topped the pre-boards. Sharon is using a scribe to write her exams. So her practice and preparation included coordination with scribe and preparing accordingly.

“She missed more than three months of school during the fag

end of 2024, so she was keen on covering lost ground and we have left it to her,” says Aby, advising parents not to make a fuss about examinations. With a supportive environment at school, Sharon only needed little external help.

“Maths is a little tough for her, so we have a tutor helping her out besides the additional classes she attends at school,” says Aby.

Does chess also need practice every day?

Aby says one will lose touch with the game so the daily practice is a must. When Sharon is tired of studying, she plays chess online. “That is the way to de-stress between studies,” she signs off.

Once the Boards get over, Sharon will be up and ready to compete in another round of tournaments.

Aghil Anand

During the event

and past district leaders, who came together to commemorate 100 years of empowering communication and leadership, says a press release.

The event was led by Mohanakrishnan G, DTM (District Director), Parthasarathy PD, DTM (Program Quality Director), and Aswathy Rajan, DTM (Club Growth Director). Key district leaders, including Arun Kumar SN (Public Relations Manager), Vijayalakshmi S, DTM (Finance Manager), and Vaisali Sridharbabu, DTM (Administration Manager), played pivotal roles in making the celebration a memorable one. A special highlight was the presence of Nina John, DTM, a founding member of Toastmasters in Tamil Nadu since 2004 and a dedicated member for over 20 years. A distinguished Past District Governor, Nina John's inspiring journey and invaluable contributions to the fraternity were recognised and celebrated during the event, the release adds.

The Centennial Stamp Release

was a defining moment, presided over by Srinivasan Ramani, Deputy National Editor of *The Hindu*. The commemorative stamp was presented to District Director Mohanakrishnan G, DTM, alongside Parthasarathy PD, DTM, and Dr. Aswathy Rajan, DTM.

Another proud moment was the launch of the district newsletter One Two Zero, unveiled by Mee-nakshi Perikaruppan, District Director of District Youth Services, Rotary District 3233, and received by Arun Kumar SN, Public Relations Manager.

The celebrations combined learning with fun through a captivating Kahoot Quiz session conducted by Vaisali Sridharbabu, DTM, featuring questions on Toastmasters' rich history and present achievements.

The morning began with a delightful breakfast and concluded on a high note with a grand cake-cutting ceremony, symbolizing the district's journey and future endeavors. The Centennial Celebration stood as a testament to the unwavering spirit and camaraderie of District 120 Toastmasters, embracing 100 years of communication, leadership, and transformation.

A stamp was released to commemorate the centennial year

Toastmasters celebrate a milestone

District 120 Toastmasters celebrated a grand Centennial milestone of Toastmasters International on February

9, 2025, at Grand Chennai by GRT Hotels. The event witnessed a gathering of hundreds of enthusiastic Toastmasters, including present

Laser vision for presbyopia

Uma Eye Clinic, an ophthalmology center in Anna Nagar, has launched 'Presbyond,' a laser vision treatment for presbyopia.

Presbyopia, an age-related condition affecting individuals typically over 40, makes it difficult to focus on near objects, often requiring reading glasses.

Electronics expo on Feb 21, 22

Neostud, Tamil Nadu Electronic and Technician Association, and 3A Business Consulting is conducting an electronics evolution exhibition, 'Time 2 Travel' (obsolete to exotechnology), on February 21 and 22, where one can experience the journey of electronics.

At the expo, one can discover how everyday electronic products such as cameras, television sets, radios, mobile phones, and projectors have evolved from earlier designs to cutting-edge advancements and

technologies.

The expo will be held at the Perumbakkam Community Hall from 10 a.m. to 5 p.m..

S. Jose Densingh Cruz, the expo organiser, said that visitors can touch the products and see how technology has evolved. People can register for quizzes. The expo will offer an interactive experience for technology enthusiasts, students and industry professionals.

For details, contact S. Jose Densingh Cruz at 73585 54114.

Remembering Bharathi

Shriram Bharathi Kalai Ilakkiya Kazhagam, a part of Shriram Group of Companies, observed the 143rd birth anniversary of poet C. Subramania Bharathi. The event was held at Krishna Gana Sabha, T. Nagar. Justice A Nakeeran of the Madras High Court delivered the presidential address and released a book 'Avaiyin Thamizhamuthu.' Kavita Jawahar, a renowned speaker, spoke on 'Paarthira Paadiya Bharathi.' On occasion, three scholars, professors Krungai Sethupathi, P. Mahendran and S. Kalaimani were honoured with a citation and cash prizes. The book was distributed free of cost to the entire audience.

Shy and beautiful: the retiring Baillon's crane

PRINCE FREDERICK

A human being christened at birth, before their potential becomes manifest, character is delineated and their frame takes complete shape, the risk of these elements being in glaring contrast to their nomenclature is immense. Birds being named after their prominent features, the alignment between what they are and what they are called comes with the accuracy of railroad track geometry. Zapornia pusilla – Baillon's crane in watercooler conversations – is as spot-on as a binomial name can get.

When fed into Latin, pusilla comes out denoting “very small”. The Baillon's crane can be missed in the field, when it is at a distance, as the magnification of the human eye is woefully short of what it takes to pick up this tiny creature. The other factor is the Baillon's

crane's predisposition to present less of itself: it moves about furtively and slides into the reeds at the slightest suspicion of being noticed.

This Baillon's crane – captured in photographs at Perumbakkam wetland on February 12, 2025 – had to come out of hiding to rinse itself in water and had to continue in the public glare to dry itself. Once the cleaning and preening exercise was complete, it scurried to the privacy of dried-up bulrushes. Again, it took the magnification of a telephoto lens to have a good look at what this tiny crane was up to.

Besides the lack of a private bath, the absence of room service (no ringing of a bell to order food from the bedside) means the Baillon's crane makes itself visible – even then only being partially scrutable – when hunger pangs gnaws at its innards. It probes for insects in shallow water.

Quiz to celebrate IEEE Computer Society's 80th anniversary

IEEE Computer Society (CS Madras) is organising a Mega ICT Quiz in the lead-up to the 80th anniversary celebration of IEEE Computer Society founded in 1946.

The quiz will cover the Information and Communication Technology history, concepts, developments, trends and current affairs.

The event is open for all including students (college and school level 10th grade and above), researchers, faculty and professionals.

The quiz will be conducted in four stages. Online Prelims, Zonal Orals (in over 10 centres), Semifinal Orals (in two centres), and Final Orals (at Chennai).

All Orals will be in-person in physical mode, except Prelims which will held online to select contestants for Orals.

Win attractive cash prizes and gifts. Certificate of participation to all and certificate of appreciation to the orals contestants.

For detailed announcement, please see <https://lnkd.in/gQG4t2SF>

Registration fee is ₹50.

Register at <https://lnkd.in/gjwjbXQD> on or before February 22, 2025
